Elements

An _____ is a _____ substance that cannot be broken down into other substances by physical or chemical means. _____ are made of only one type of _____. There are _____ known elements, _____ of which occur naturally. _____ collected a large amount of information about the elements, such as the number of protons and electrons each element has and the atomic mass of each _____. Also, each _____ has a unique _____ and _____. All of these data, and more, are collected in an organized table called the periodic table of the elements.
