The structure of an atom

An atom is so small that _____
An atom is so small that _____ of them could fit on the head of _____ pin. Yet, atoms are made up of even smaller particles called neutrons, protons, and electrons. Neutrons and protons are located at the center of the _____ which is called the nucleus. Protons are positively charged particles and _____ are particles that have no _____. Electrons are negatively charged _____ that are located outside the nucleus. Electrons constantly move around an _____ nucleus in energy levels. The basic structure of an atom is the result of the attraction between protons and _____. Atoms contain an equal _____ of protons and electrons, so the overall charge of an _____ is _____.
