# Nurses

Nurses develop and implement a plan of care and work \_\_\_\_\_ with the patient, the patient's family, and other health care \_\_\_\_\_ and para-professionals. Nurses help coordinate the patient care performed by other members of a health care team such as \_\_\_\_\_ therapists, medical practitioners, \_\_\_\_\_ workers, and dietitians. Nurses frequently act as patient advocates.

The nursing career structure varies considerably throughout the world. Typically there are several distinct levels of nursing \_\_\_\_\_ distinguished by increasing education, responsibility, and skills. The major distinction is between task-based nursing and \_\_\_\_\_ nursing. Nurses throughout the world are increasingly employed as advanced practice nurses, such as \_\_\_\_\_ nurse specialists and nurse practitioners, who diagnose health problems and prescribe \_\_\_\_\_ and other therapies. At the top of the educational ladder is the doctoral-prepared nurse. Nurses may gain a PhD or another \_\_\_\_\_ degree, specializing in research, clinical nursing, and so forth. These nurses practice nursing, teach nursing, and \_\_\_\_\_ out nursing research. As the science and art of nursing has advanced, so has the demand for doctoral-prepared \_\_\_\_\_.
