Rainbows

A rainbow is an _____
_____ and _____ phenomenon that causes a spectrum of light to
_____ in the _____ when the Sun shines onto droplets of _____ in the Earth's
_____.

Rainbows can be _____ whenever there are _____ drops in the air and sunlight shining
from behind at a _____ altitude angle. The most _____ rainbow displays happen when half
of the _____ is still dark with _____ clouds and the observer is at a spot with clear sky in
the direction of the _____. The result is a _____ rainbow that contrasts with the darkened
background.

The rainbow effect is also commonly seen near _____ or _____. In addition, the effect
can be artificially _____ by dispersing _____ droplets into the air during a
_____ day.
