# Water Vapor

Do you know how clouds form? \_\_\_\_\_ form when cool air mixes with water vapor. Water vapor is a \_\_\_\_\_ that forms when water from oceans, \_\_\_\_\_ rivers, and \_\_\_\_\_ evaporates. Water vapor also \_\_\_\_\_ from water \_\_\_\_\_ plants and in \_\_\_\_\_ soil. The amount of water vapor the air can hold depends on how hot or cold the air is. Warmer air \_\_\_\_\_ more water vapor than cooler air. When warm air \_\_\_\_\_ it cools. \_\_\_\_\_ cooled water vapor changes into a liquid and mixed with dust in the air. Then water droplets are formed. There are millions of water droplets in a cloud. There are also many kinds of \_\_\_\_\_. The type of cloud formed depends \_\_\_\_\_ the weather \_\_\_\_\_ height at which the water vapor condenses. A cloud that is close to the ground is called fog.

What's your favorite type of cloud?
