# Pythagoras' Student

The \_\_\_\_\_ Adjective \_\_\_\_\_ Adjective mathematician Pythagoras believed that all numbers were \_\_\_\_\_ Adjective (could be written as a fraction), but one of his \_\_\_\_\_ Plural noun Hippasus proved (using geometry, it is thought) that you could not \_\_\_\_\_ Verb the square root of 2 as a fraction, and so it was \_\_\_\_\_ Adjective.

However Pythagoras could not accept the existence of irrational numbers, because he believed that all numbers had \_\_\_\_\_ Adjective \_\_\_\_\_ Plural noun. But he could not disprove Hippasus'; "irrational numbers"; and so Hippasus was \_\_\_\_\_ Verb overboard and \_\_\_\_\_ Verb
