## The Solar System

Once there was a little Galaxy, in the $\qquad$ Universe. That galaxy was called $\qquad$
. In this solar system, containing $\qquad$ planets, a $\qquad$ that
gives us our heat, and light, and $\qquad$ thousands of stars. $\qquad$ planets, hmm seems like a small number. Well think again! Even though eight is a $\qquad$ number, these planets are much bigger than you may think, bigger than you may be able to imagine. These planets include, Jupiter, Neptune,
$\qquad$ Mercury, Mars, Saturn, Venus, And the $\qquad$ (where we live.) There are LOTS of
different amazing things in our solar system, and even beyond that, in the $\qquad$ . Just imagine, we are just a tiny little dot in the entire $\qquad$ .
