The surgeons at the hospital in the Medical University of Vienna have rewired his nervous system.
He isto be the first person from the UK to undergo this cutting-edge technique in the field of bionics.
Cpl Garthwaite said he had been "lost for words"; when he learnt that and was "honoured"; to have been chosen.
'Difficult surgery';
Surgeons at the hospital are working closely with bionics company Otto Bock, in Vienna, to create one of the
most intelligent bionic systems in the world.

In an operation lasting six hours on Tuesday surgeon Prof Oskar Aszmann and his teamoutout
which of the mass of tiny nerves from his shoulder joint operated his arm and hand. Once they isolated those,
they rewired them into his chest.
After the surgery, Prof Aszmann said: "It all went extremely well.
"It was a surprise to me because he had a shrapnel injury, there was a rocket wound, so normally you have to
expect a lot of scar tissue, but it was not the case.
"It was a difficult surgery, but we could identify all the nerves that we wanted to and transfer them to the
appropriate targets.";

In the coming months these nerves will grow. Cpl Garthwaite's mind will work out which nerves do what, and
will learn how to control those nerves.
He will then be able to control his bionic arm in such a way that it will become intuitive, unlike the slow robotic
movements of his current arm.
Prof Aszmann said the surgery went "extremely well";
He will be able to think several moves and his arm and hand will react naturally. His bionic arm will be
thought-controlled.
Exciting

Before the surgery, Cpl Garthwaite said he was excited at the prospect of having a more natural arm movement
and being able to use it quickly rather than the slow process it can be currently and even the possibility of being
able to feel hot and cold.
He said. "I still have my days and I still have fleshbooks and mamoriae which will never leave us, but you
He said: "I still have my down days and I still have flashbacks and memories, which will never leave us, but you
just learn to crack on.
just learn to crack on.
just learn to crack on.
just learn to crack on.

"You just want to look into the future and just think what's actually going to happen, how much it's going to
benefit me.";
