Reptiles

Reptiles are _____^{Noun} that are very different from _____^{Proper noun}. Amphibians have to be always _____^{Verb ending in ing} to some water source, while _____^{Name of a person} are free from that requirement. The reason that they are free from having to be close to _____^{Location} is that they have _____^{Adjective} skin which keeps them from _____^{Present tense verb} so they don't need moist skin to _____^{Verb}. Another reason is that they _____^{Verb} amniotic _____^{Noun} with a _____^{Animal} so they don't need _____^{First name} to keep their _____^{Proper noun plural} from drying out. Reptiles have more efficient _____^{Plural noun} as well.

Reptiles are similar to _____^{Name of a person} in that they are _____^{Verb ending in ing}. The word _____^{Verb} _____^{ending in ing} means that they are basically cold blooded and rely on the outside environment to keep them _____^{Verb ending in ing}. So, if it's cold out, they will be _____^{Animal} and vice versa.

There are different parts of an amniotic egg. The _____^{Pronoun} provides nutrients. The _____^{Proper noun} is made of proteins. The amnion surrounds and stabilizes the _____^{Year}. The _____^{Location} is involved in gas diffusion, and the chorion surrounds all the other _____^{Event}. And of course, the leathery _____^{Plural} _____^{noun} protects

everything inside the _____ Verb _____.

_____ Name of a person _____ kill their prey by _____ Verb ending in ing _____ it. _____ Proper noun plural _____ can breathe and swallow at the same time. Reptiles have a closed circulatory system. They use _____ Plural noun _____ Plural noun _____ to get rid of waste, which also helps conserve _____ Article _____. Snakes can smell through their _____ Animal _____ and pit vipers can sense _____ Preposition _____ from their prey. Two examples of pit vipers in _____ Location _____ would be the rattlesnake and copperhead. Some snakes reproduce by _____ Number _____ which is where the female can produce young without a male.
