Native readers and writers of English are often unaware that the complexities of English spelling make written English a somewhat artificial construct. The traditional spelling of English, at least for inherited words, preserves a late Middle English phonology that is no one's speech dialect. The artificial preservation of this much earlier form of the language in writing might make much of what we write intelligible to _____Proper Noun_____ (1343-1400), even if we could not understand his speech.

Written Language refers to communication in its written form - most commonly in the forms of reading and writing. However we are in a need for oral language; speaking and listening skills are acquired naturally by young children remarkably without the need for having to teach them. Language in its written form has become a process that is required in our oral language rules and must be clearly taught. There are many languages in our world that exist, but do not have a written form.
