Gravity

Gravity is a basic Noun in the universe that attracts all Noun - Plural to each other. You stay on the Noun because of the attraction between your Noun and the Location . As Noun objects get further apart, the Adjective force between them gets smaller. It never gets to zero; it just gets too small to matter. This is why astronauts seem to be Adjective in space. They are not Number ; they are simply Verb - Present ends in ING AROUND the earth. Because the amount of gravity depends on your Noun , your weight is Adjective depending on how far away you are from Location
