12. Proper Noun

# Gravity

Gravity is a basic           Noun           in the universe that attracts all           Noun - Plural           to each other. You stay on the ground because of the           Noun           between your           Noun           and the earth. As           Number           objects get further apart, the gravitational force between them gets           Adjective - Comparative          . It never gets to zero; it just gets too           Adjective           to matter. This is why           Noun - Plural           seem to be weightless in space. They are not           Verb - Present Tense          ; they are simply falling AROUND the           Noun          . Because the           Noun           of gravity depends on your mass, your weight is different depending on how far away you are from           Proper Noun          .
