Mars Mad Libs

1. Adjective _____

Mars Mad Libs

Mars is the _____Adjective_____ planet. It is the fourth planet from the sun. Mars has two moons. Mars has iron inside it and in its soil which gives it a red, rocky appearance. Some scientists think that there was life on Mars. To try and prove that there was life on Mars, NASA sent a rover to Mars. Over the years they have sent many rovers and the current rover on Mars is Curiosity. Mars, surprisingly, actually has some ice caps in its surface. Mars also has some canyons and volcanos. Its air is very thin, and a human could not breathe there. In the afternoon and night on Mars, the temperature is in the negatives. Mars is a very interesting planet. Maybe someday you will become an astronaut, and go to MARS!!!!!
