# Learning R

I'm embarking on a Adjective adventure. I'm learning the Adjective programming Language R.

At first it seemed Adjective, Adjective, and Adjective. But every day I feel more confident in my developing abilities. Today we learned about data Noun - Plural and Noun - Plural.

That will be very helpful. Last week we learned Verb - Past Tense around with some pretty

Adjective data Noun - Plural. I feel a little confused still about Noun - Plural,

Noun - Plural, Noun - Plural, Noun - Plural and dataframes and how and when to use what.

Probably the Adjective - Ends in EST difficult thing is that there are so many different ways to do the same thing. It's not like you can memorize one Noun or Noun and then you're done. Last night, after

Verb - Present ends in ING in RStudio for several hours I had the Adjective - Ends in EST dream. I was in a

Adjective data frame with Proper Noun, Proper Noun, Proper Noun, and

Proper Noun. We were all playing with the data and having a Adjective time until Jared

Verb - Past Tense an entire column, and made two of us just disappear. Luckily I Verb - Base Form up.

whew!
