About Soil

_____Noun_____ comes in all different types and you are going to learn them. Topsoil is the very top layer of soil. It is black and holds the most water.Topsoil helps us grow our food.Worms mix the topsoil as they move.Topsoil has broken down plants and animals witch called decay.Humus has what plants need to grow. Subsoil is the next layer. Subsoil is lighter in color and does not hold as much water. Subsoil helps support topsoil. Subsoil does not have as much humus as topsoil does. Bedrock is the last layer. Bedrock is like a bed for soil because it is at the bottom. It has raw material for making new soil. Bedrock holds up subsoil and topsoil.

Those are three main types of soil. and now you know about them.
