Rock Song Remix

Rock Song (Remix)

I got some coal its a _____Adjective_____ of rock. A solid with _____Adjective_____ different types. Igneous, metamorphic and sedimentary. But they are _____Adjective_____ made differently.

It's a rock. It's a ro-o-o-ock. Minerals, materials, _____Adjective_____ mixed. Different colors _____Adjective_____ and _____Adjective_____. Sides with textures _____Adjective_____ and _____Adjective_____, oh. Ye-e-e-eah it's _____Adjective_____ rock.

Its funny how minerals are in rocks. They create the elements. Such as silver, gold and mica all around they are alike(a sound). The composition, color, and texture.

It's _____Adjective_____ rock. It's a ro-o-o-ock. Minerals, materials, all mixed. Different colors _____Adjective_____ and _____Adjective_____. Sides _____Adjective_____ and _____Adjective_____, oh. Ye-e-e-eah it's a rock.

Now lets talk about _____Adjective_____ igneous. It all starts in and out of volcanoes. Intrusive means inside extrusive means outside, oh. Classification is such flow.

It's igneous, it's igneou-ou-ou-ous! _____Adjective_____ or _____Adjective_____ it's still the same. It can be gra-nite, basalt, or obsidian cooled by magma oh. But we still use it for building(background-and tools-)

Now this thing is kind of . Igneous changes slow. Over millions of years into sedimentary here oh, by _____Adjective_____ different steps in one.

_____Adjective_____ steps, _____Adjective_____ ste-e-e-eps. weathering, erosion, cementation, deposition. It breaks up and layers on, sedimentary _____Adjective_____ along. Oh, oh, its _____Adjective_____ steps.

Sedimentary

is layered and cemented. Over thousands of years. There are three _____Adjective_____ clastic, chemical, and organic. Oh, shale and limestone are _____Adjective_____ too. His name is sed. His name is se-e-e-ed. It takes some time to erode. First erosion, then deposition, cementation the act of flattening oh, ye-e-e-eah his name is sed{(Background) And he's used in building }

The process is still the same. Just like iggy and sed. Only changes into something called _____Adjective_____ oh. Just by a _____Adjective_____ morphing.

It's morphed, it's mor-or-or-or-orphed. Sed just changed into meta-a-amorphic. Only heat and pressure feels much better. Just trying to stay altogether. Oh-o-oh yeah sed is morphed.

Morph is kind of _____Adjective_____ around. Foliated which is the _____Adjective_____ and _____Adjective_____ layers. O-oh they can be both foliated or not. Just like marble and quartzite.

It's morph. It's mor-or-or-orph. That one that's _____Adjective_____ changing. Created by the different types, heat and pressure that's what it's like. Just used in building like the rest.

Basically they're all the same. All changing into one another. All the steps into each one is just a _____Adjective_____ decision oh, its called the rock cy-ycle.

The rock cycle. The rock cyc-le-le-le-le. _____Adjective_____ million years and _____Adjective_____ million steps. Going around and around and around and around oh, there is no end coming down.

You might not know it but it is the rock cycle. Just never known it so _____Adjective_____. They all change into _____Adjective_____ another, _____Adjective_____ different types just all together. Oh oh, the rock cycleee.

It's a rock. It's a ro-o-o-ock. Minerals, materials, _____Adjective_____ mixed. Different colors _____Adjective_____ and _____Adjective_____.

Sides with _____Adjective_____ rough and _____Adjective_____, oh. Ye-e-e-eah it's a rock.
