# Charles' Law

Once upon a time, there was a man named           Proper Noun           Charles who did an experiment with           Noun - Plural          . He learned that different gasses of the same           Noun           at the same heat, grow uniformly. This proves that           Noun           and           Noun           have a           Adverb           proportional           Noun          . This means that when one goes up, the other goes down. The one thing that never changes in this equation is the           Noun          . This law also           Verb - 3rd Person Singular Present           why bread rises in the oven, and why lung capacity reduces when they the weather is           Adjective          .
