## A new element!

Proper Noun is the temporary Proper Noun name Number for the transactinide element
having the atomic number $\_\_\_$ and temporary element symbol $\_\_\_$ . It is also known as
eka-radon or element, and on the periodic of the elements it is a
element and the last one of the Proper Noun period. Proper Noun is currently the only synthetic
member of group It has the highest atomic and highest atomic or
all the elements discovered so far.
The radioactive atom is very unstable, due to its high mass, and since, only three
or possibly four atoms of the isotope Verb - Non 3rd Person Singular Present have been detected.[
Preposition or subordinating conjunction ] While this allowed for very little experimental characterization of its
properties and possible compounds, theoretical calculations have resulted in many predictions, including some
unexpected ones. For example, although is a member of Group, it may possibly
not be a $\_$ Adjective gas, unlike all the other Group $\_$ elements.[ $\_$ Number $\_$ ] It was
formerly thought to be a gas but is now predicted to be a solid under conditions due to
relativistic effects.[Number]
