Noun-drug can 'reverse' Noun in animal studies

US scientists have performed a dramatic _____ of the _____ process in animal studies.

They used a chemical to rejuvenate _____ in mice and said it was the equivalent of transforming a 60-year-old's _____ to that of a 20-year-old - but _____ strength did not improve.

Their study, in the journal Cell, identified an _____ new mechanism of _____ and then reversed it.

Other researchers said it was an "_____ finding".

_____ is considered a one-way street, but now researchers at Harvard Medical School have shown that some _____ can be reversed.

Their research focused on a chemical called _____. Its levels _____ drop in all cells of the body with age.
