US scientists have performed a dramatic of the verb - Present ends in ING process in animal
studies.
They used a chemical to rejuvenate in mice and said it was the equivalent of transforming a
60-year-old's <u>body part</u> to that of a 20-year-old - but <u>Noun</u> strength did not improve.
Their study, in the journal Cell, identified an new mechanism of verb - Present ends in ING
and then reversed it.
Other researchers said it was an "finding".
shown that some can be reversed.
Their research focused on a chemical called Proper Noun. Its levels Adverb drop in all cells of the
body with age.
