10.	Noun
11.	Location
12.	Verb Present Ends In S
13.	Location
14.	Food

The Water Cycle

In science class, we have been learning about the Water Cycle! My teacher thinks it's, but it's
just water. She said the water cycle describes how water moves through Earth's land, oceans and atmosphere!
Water always exists in all three places, in many forms. It is in lakes and rivers, glaciers and ice sheets, oceans
and seas. I have been to the ocean before with my little brother. He into the ocean and
"I want to be a cloud!" He is
The water cycle is made up of three major parts: evaporation, condensation and precipitation. Evaporation is
when a liquid changes to a gas. I wish I could evaporate my brother. He loves science and thinks he is Bill Nye,
but e calls himself " Nye." Weirdo.
In the water cycle, liquid water in the ocean, lakes or rivers evaporates. When it evaporates, it becomes water
vapor. Water vapor is an invisible gas. Evaporation is driven by the sun. The sun warms up the water on the
surface of the ocean. The molecules that make up water start moving around quickly and spread apart. The liquid
water then turns into an invisible gas. Speaking of invisibke gas, that's what my brother called his gas when I got
Adjective at him. I had to explain to him that you don't see gas, you Verb Base Form it! He is gross.
Back to the water cycle- Condensation is when gas changes to a liquid. In the water cycle, water vapor in the
atmosphere condenses. The gas molecules that were once warm and moving apart quickly become cooler and
move

closer together. This causes the vapor to become liquid. Clouds can form as water vapor condenses. One time,
my brother said he was going to turn himself into a cloud. He covered his in
Noun and sat Location in the sun. It obviously didnt work! I'm telling you, he is SO WEIRD.
Finally, we have precipitation- Precipitation is any liquid or solid water that falls to Earth after condensation
happens in the atmosphere. Rain, snow and hail are all precipitation. Precipitation is how water is cycled from
the atmosphere to the Earth. My little brother verb Present ends in S precipitation. He was so excited when I
taught him about the water cycle that he decided he wanted to model precipitation. The only problem was that h
did it in my! He brought a water in and started spraying me and yelling "I AM
PRECIPITATIOOOONNNNN!" I have had enough of him.
