22. Noun

Use Strong Passwords

Password Security

Not all passwords are the same. Some are _____ Adjective while others are _____ Adjective. We want to make secure ones. For starters, don't use your name, your pet _____ Animal 's name, or the name of your favorite professional _____ Sport team. Secure passwords shouldn't be connected to you, so save that self-expression for your creative _____ Verb Present ends in ING club or take up interpretive _____ Activity. Thankfully, it doesn't take a _____ Vehicle scientist or brain _____ Occupation to create a strong password. Here's one trick for password making that you can share with your friends and family at your _____ Holiday Cook Out.

Take four random letters. For example, L N O R.

Now make a short phrase with words that begin with those letters.

Word Starting with L

Word Starting with N

Word Starting with O

Word Starting with R

Use those four words as a passphrase, a password but longer and more secure. It's so simple and easy, even your cranky _____ Family Relation will thank you. There's just one catch. You need unique passwords for every account.

Did you know the average person has over _____ Number internet accounts? Whether it's a _____ Adjective _____ name like Amazon, a specialty _____ Noun store, or a service that streams _____ Adjective films from _____ Country, they all require an account. Some people just use the same password and write it down on a _____ Noun they hide under their keyboard. A password manager can create and remember the passwords for you.

Passphrases and password managers take the worry out of passwords, so you can focus your mind on _____ Verb Present ends in ING the train or that nice _____ Noun you'll be cooking when you get home after work

Use Strong Passwords: Create long, unique passwords. Keep track of them with a password manager. Protect them with two step verification.
