Planet

A planet is a large	Noun	that orbits a	Noun .	To be a plane	t, an object	must be	
Adjective 6	enough for g	ravity to have so	queezed it into a	Adjective	, or	Adjective	, shape,. It
must also be	Adjective	enough for grav	vity to have swe	pt up any	Adjective	_ or	Adjective
objects from its pa	th, or orbit,	around the star.					
Occupation plural	believe	planets begin to	form when a d	ense cloud of	Noun	and	Noun ,
called a nebula, sp	ins around a	newly formed s	tar. Gradually,	gravity causes	the bits of	Noun	in the
nebula to clump to	gether. Slow	yly, these clump	S Verb Base Fo	and _	Verb Base F	orm .	Eventually,
these clumps beco	me planets.						
Earth is one of eig	ht planets th	at circle the star	we call the sun	. Together, the	e sun, the pla	anets, and	smaller
Noun Plural	such as mo	ons make up ou	r solar system.				
The four planets cl	losest to the	sunMercury, _	Cool Name	_, Earth, and	Marsare c	alled	Adjective
planets. These plan	nets are	Adjective an	d rocky like Ea	rth (Cool N	iame me	ans "earth	ı" in
Language).	. Earth is the	Adjective Ends	in EST of th	e four	djective p	lanets, an	d Mercury is
the Adjective Ends	s in EST	All are surround	led by a layer of	Noun	, or atmos	phere. The	eir atmosphere
vary in density fro	m Mercury's	extremely	Adjective at	mosphere to V	enus', whic	h is thick	with clouds of
Adjective							

The four planets that are more distant from the sunJupiter, Saturn,, and Neptuneare called
gas giants. Gas giants are compared with Earth, and they do not have Adjective
Noun Plural . They are balls of gas. Jupiter and Saturn are composed mostly of
and Uranus and Neptune have greater proportions of water,
ammonia, and Each of the four gas giants also has a ring system. A planet's rings are made of
Noun , Noun , and small Noun Plural. Saturn's ring system is the Adjective Ends in
EST .
Every planet except Mercury and Venus has at least one satellite, or moon. A planet's moon
orbits it as it revolves around the Jupiter, Saturn, and Uranus each have dozens of Noun
<u>Plural</u> .
In addition to orbiting a star, planets also <u>Verb Base Form</u> , or <u>Verb Base Form</u> , around an axis. An
axis is an invisible Noun that runs through the center of a planet. One complete rotation is called a
A day on Earth is about 24 hours. A day on Jupiter takes only 9.8 hours. Venus has the longest
day of any planet in our solar system. It takes Earth days for Venus to make a complete turn on

its axis.

Unlike stars, planets do	not experience nuclear	Noun, the proces	ss of combini	ng tiny particle	es called
Noun Plural to re	elease energy. Nuclear	oun creates	Noun (h	neat and light)	and makes
stars Verb Base Form	Because planets do not ha	Adjective Adjective	_ fusion, they	y do not produc	ce their own
Instead,	, they shine withNoun	_ reflected from a _	Noun	When we se	e planets in
the night sky, such as V	enus, the so-called "Evening	Proper Noun ,	" we're seeing	g reflected	Noun .
