7. Adverb
8. Noun
9. Noun Plural

## Case 2

Situation: The evening pharmacist was behind in the verification queue for the shift, because other staff members were \_\_\_\_\_ Adjective or attending a Code Blue response. The \_\_\_\_\_ Adjective pharmacist has the reputation for verifying the highest numbers of orders during a shift; on a \_\_\_\_\_ Adjective shift, the pharmacist verified over 400 individual orders, which is far beyond other pharmacists. This pharmacist has been counseled about a past history of medication errors; many of them were careless as their root cause was the bypass of accepted safeguards in the \_\_\_\_\_ Noun for order review and verification. During the shift report, the evening pharmacist reported to the \_\_\_\_\_ Adjective pharmacist that they did not review laboratory values for most of the orders verified where this action was required. To quote the \_\_\_\_\_ Adjective pharmacist during report, "I was too \_\_\_\_\_ Adverb and wanted to get out on time - so I blew it off - no biggie." The following day, the director of \_\_\_\_\_ Noun received 2 complaints from \_\_\_\_\_ Noun Plural who reported that drug levels were not optimal and should have been adjusted based on laboratory values but were not because of the evening pharmacists' negligence.
