Ariel & Josefina

Wild Plural noun are the original source of many medicines, including painkillers like aspirin and antibiotics like penicillin. The Adjective in wild species are used to treat diseases like depression and cancer. For example, the foxglove, shown in figure 6-14, contains compounds called digitalins that are used to treat heart Adjective. These plant compounds are assembled according to instructions coded in genes. So the genetic information carried by diverse species is like a "natural library"; from which we have a great deal to learn.
