Ariel & Josefina

Wildare the original source of many medicines, icluding painkillers like aspirin and
antibiotics like penicillin. Thein wild species are used to treat diseases like depresion and
cancer. For example, the foxglove, shown in figure 6-14, contains compounds called digitalins that are used to
treat heart These plant compounds are assembled according to instructions coded in genes. S
the genetic information carried by diverse species is like a "natural library"; from which we have a great deal to
learn.
