Superman

Superman possesses extraordinary powers, traditionally described as 'faster than a speeding _____Noun_____ more powerful than a _____Noun_____ and able to leap tall _____Plural noun_____in a single bound'. For most of his existence, Superman's famous arsenal of powers include flight, super-strength, invulnerability to non-magical attacks of ordinary force, super-speed, _____Verb ending in ing_____powers, super-hearing, and super-breath, which enables him to freeze objects by _____Verb ending in ing_____on them, as well as exert the propulsive force of high-speed winds.

The source of Superman's powers has changed subtly over the course of his history. It was originally stated that Superman's abilities derived from his Kryptonian _____Noun_____ which made him eons more evolved than humans. This was soon amended, with the source for the powers now based upon the establishment of _____Proper noun plural_____gravity as having been stronger than that of the Earth.

Superman is most vulnerable to Kryptonite, mineral debris from _____Location_____transformed into _____Adjective_____material by the forces that destroyed the planet. Exposure to Kryptonite radiation nullifies Superman's

powers and immobilizes him with pain; prolonged exposure will eventually kill him. The only thing on Earth that can protect him from Kryptonite are _____Plural noun_____ which block the radiation.
