Bizzarre Sea Creature

• Think _____Plural noun_____are scary? They're downright _____Adjective_____compared to the Bathynomus _____Adjective_____ a very terrifying (and very real) sea creature that recently surfaced from the deep.

See Flickr photos of the creature. (Warning: May give you nightmares.)

So, what the heck is it? According to an article from _____Noun_____News, the Bathynomus giganteus (henceforth known as _____Noun_____is a type of _____Adjective_____isopod, 'a large crustacean that dwells in deep Atlantic and Pacific waters.' It passes the time by feeding on 'dead whales, fish, and _____Plural noun_____.'

Ol' Bart attached itself to a _____Noun_____that was exploring the ocean floor. When the _____noun_____surfaced, people got an unexpected look at the slithery _____Noun_____. The creature is a pinkish in color, two and a half feet long, and wouldn't be out of place in an Ed Wood movie (no offense, Bart).

The story was originally posted on Reddit by a guy who works for the submarine company. It quickly went viral from there. Once news of the creature's existence hit, Web searches immediately soared. Online lookups for 'sea creature found,' 'giant _____Noun_____, and (our personal favorite) _____Adjective_____sea creature' all roared.

It's worth noting that the existence of the Bathynomus giganteus isn't, in and of itself, a surprise. Scientists have long

been aware of them. The shock came from seeing one up close in all its cockroach-like glory. Can't. Look. Away
